

Dow Jones CASE Egypt Titans 20 IndexSM

Methodology

Index Universe

The index universe is defined as all equities trading on the Cairo & Alexandria Stock Exchanges (CASE) and domiciled in Egypt, excluding securities that have had 30 or more nontrading days during the three months prior to selection. If a company has more than one class of shares in the index universe, then only the larger class is eligible.

Selection List

The selection list is defined as the 20 current component stocks plus the 20 largest noncomponent stocks by float-adjusted market capitalization.

Stock Selection

- 1 All companies on the selection list are ranked by each of the following:
 - Float-adjusted market capitalization
 - Sales/revenue
 - Net income
- 2 For each company, a final rank is calculated by weighting the float-adjusted market capitalization rank at 60%, the sales/revenue rank at 20% and the net profit rank at 20%.
- 3 The top 20 stocks by final rank are selected as index components

Buffer Rules

The component list is finalized based on the following buffer rules:

- 1 If a noncomponent is ranked among the top 10 stocks in the final ranking, then it replaces the lowest-ranked index component.
- 2 If a component is not ranked among the top 30 stocks in the final ranking, then it is replaced by the highest-ranked noncomponent.

Review Frequency

The index's composition is reviewed annually in June. Float figures are updated biannually and provided by CASE.

Weighting

The index is weighted by float-adjusted market capitalization. Components' weights may be capped so that one component may have a weight of up to 35%, and all other components may have weights of up to 20%. Weights are reviewed quarterly.
